

Get Wise To A BETTER Ride

Unsurpassed Comfort – Enjoy Longer Rides!

The last mile feels like the first, thanks to AIRHAWK's exclusive DRY FLOATATION® technology. Patented system eliminates painful pressure points for a longer, more comfortable ride. Memory foam can't do it. Gel seats can't do it. Only genuine AIRHAWK can do it. And it's portable – use it anywhere else you sit.

No More Hot Seat

Open mesh side panel allows air to circulate through individual air cells creating extra ventilation to reduce heat build-up.

Premium Quality – Built To Last

Every AIRHAWK is handcrafted from soft, pliable, non-hardening neoprene and features a breathable, stretchable nylon/lycra blend outer cover and a non-skid urethane base to protect your bike's seat.

No More Numbness

Adjustable air inflation and multiple cells provide a custom fit to your personal contour for every ride.

Revolutionary NEW design features larger air cells for added comfort!

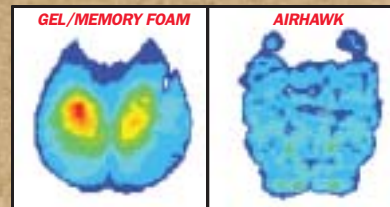

MADE IN U.S.A.

Discover the most revolutionary accessory in riding comfort, the AIRHAWK® Comfort Seating System. DRY FLOATATION® is the key factor which makes this cushion far superior and more comfortable than any motorcycle seat. Each AIRHAWK is made up of individual, interconnected air cells that allow air to slowly transfer from chamber to chamber and evenly distribute the pressure – *namely your big ol' behind!* AIRHAWK's patented Comfort Seating System also reduces road vibration, absorbs shock, and increases air circulation to reduce heat buildup. So go ahead, slap an AIRHAWK on your bike, then get ready to enjoy a longer, more comfortable ride.

Computer Pressure Mapping Proves AIRHAWK's DRY FLOATATION® Technology Really Works!

Since 1973, our exclusive DRY FLOATATION® technology has alleviated pressure sores and improved wheelchair comfort within the medical industry. Now, the AIRHAWK Comfort Seating System brings this same long-lasting comfort to the motorcycle. The red and yellow areas on the left photo indicate uncomfortable pressure points. But notice how the AIRHAWK seat cushion on the right virtually eliminates pressure points allowing more blood circulation throughout the buttocks.
